

It's helpful to have your own tools on hand for easy DIY repairs.
Here are some common tools myself and others have kept in our classrooms.
Non-affiliate Amazon links included for your convenience.

Sound Post Setter

Use to get fallen soundposts & small items out of violins
& violas, \$14

Flexible Claw Grabber

For grabbing items out of the insides of cellos & basses,
\$10

Peg Compound

Apply a small amount to the peg (where it should grip the
peg box) when pegs stick & won't turn smoothly, \$8

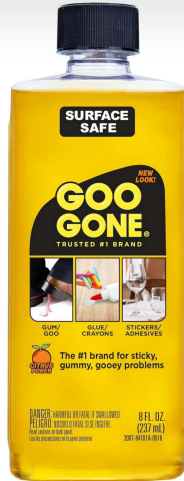

WD-40

For when fine tuners get stuck & need lubrication, \$12

Use with caution. Do not let the lubricant get on the body of the instrument.

Goo Gone

Use sparingly for when rosin gets too gunked up on bows (or as needed elsewhere), \$5

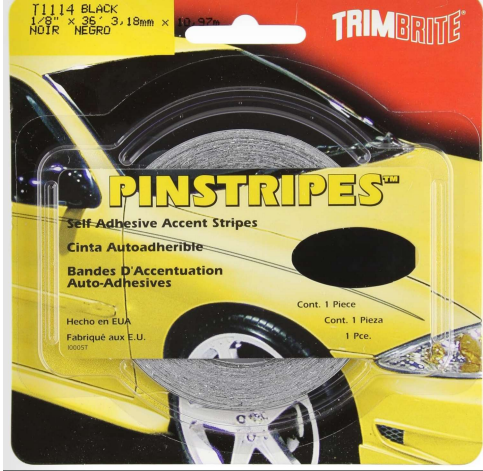

Cork Shelf Liner

One roll will last a lifetime, or until the adhesive dries up... use for when cork falls off student chin rests & you need to replace, \$7/roll

Sand paper

In desperate cases when there's no way to get the instrument to the shop, use sandpaper to shape bridge feet. Feet should match curve of instrument top.

Auto Pinstripe Tape - 1/8"

For finger tapes. One roll will take care of a whole class of beginners. Available online or at auto parts store.
